

ADF File-Audit Integrity Solution

Enhance job integrity and productivity of your inserting solution

∴ **Improve job integrity with comprehensive piece-level job tracking**

∴ **Demonstrate proof-of-process for clients, while providing piece status in real time**

∴ **Create higher quality, audit-proof mail**

∴ **Optimize machine and operator up-time for greater productivity**

∴ **Simplify mail piece process, including reprints**

Today's mailers need to assure growth, while managing operations amidst emerging regulatory compliance decisions, the threat of competition and an increasing cost of doing business.

But how can they do it? By making changes to take advantage of new business opportunities. By infusing equipment with tools to assure output quality and boost system productivity. By streamlining and automating manual processes.

Sounds complicated – and expensive. It doesn't have to be.

Let Pitney Bowes help you take the first step toward production intelligence automation.

The Pitney Bowes File-Audit Integrity Solution.

Pitney Bowes is offering an integrated solution to enhance production. It consists of file-audit software for job and piece-level tracking, along with a workstation and file server for file management tasks – all directly integrated with your Direct Connect inserter control system.

With ADF File-Audit Integrity, you can:

- Introduce additional job integrity checkpoints for more assured processing accuracy
- Demonstrate a documented proof-of-process to your clients
- Determine mail piece status in real-time for faster follow-up
- Increase system uptime for higher productivity
- Streamline – or eliminate – your manual quality control tasks
- Automate and improve your mail piece reprint process

Because the system is completely integrated, everything can be managed through Direct Connect. No separate monitors or control systems are required.

Meet growing compliance needs for tighter integrity.

To keep pace with today's more demanding regulatory requirements, you need tighter control and the information to back it up. The ADF File-Audit Integrity Solution provides the comprehensive job and piece-level tracking you need. Job integrity verification at various checkpoints can be provided on a job-by-job basis, depending on application setup:

- Process log
- Sequence verification
- Audit to sequential input file
- Mask detection
- Ascend/descend verification

Document proof of process and status in an instant.

Your clients may be looking for information on how you run your mailing jobs. Or they may need to prove that a job was processed. The ADF File-Audit Integrity Solution can provide the assurance they need.

Use it to document – and demonstrate – mail piece proof-of-process. Show them how quickly you can determine mail piece status. It's easy to archive and restore historical records of mail pieces and access the data when needed.

Now you can provide a clear timeline of job events and an audit trail. Dependable report generation and fast follow-up strengthens the link between you and your clients.

Take quality control to the next level.

Now you can streamline – or eliminate – your manual QC and job reconciliation tasks, and let your system do the work. No more hand-written logs are needed.

The processing information from any additional quality checkpoints on your inserter can be automatically captured and consolidated in Direct Connect via creation of both an input file and a corresponding output file for every mailing job. The machine updates the output file with the following information in real-time as the job is completed: status, disposition, cause and timestamp.

At the end of a job run, operators can immediately generate and review a list of everything that was outsourced and reconcile the missing pieces.

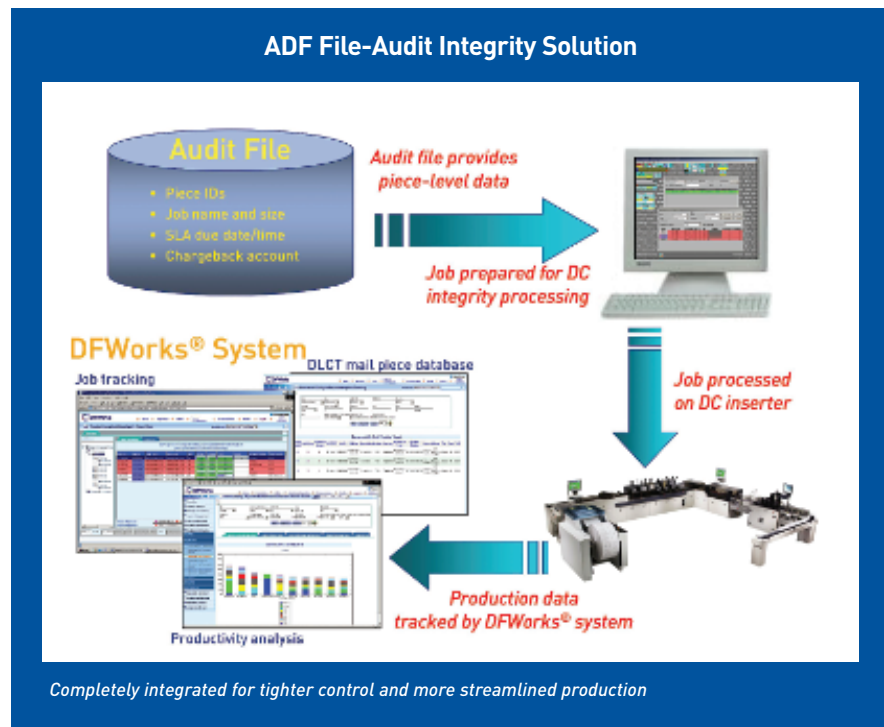

ADF File-Audit Integrity Solution

Higher productivity. Fewer delays.

System uptime is critical for most production mail shops.

When an intelligent inserter outsorts a mail piece, a traditional bolt-on sequence checking system will cause the inserter to stop on the next piece – delaying production. It has no way of knowing that the inserter intentionally diverted the piece.

Not so with our File-Audit Integrity Solution. Because it's integrated with Direct Connect, the mail piece ID can be tracked on the inserter from start to finish. Should the system detect an assembly error and outsort a mail piece, Direct Connect "knows better" and keeps the inserter running. Every mail piece is accounted for, and job integrity is ensured!

Get your reprint process under control.

Now you can automate and improve your mail piece reprint process too.

After job reconciliation, Direct Connect can produce a reprint file that specifies (by sequence number or piece ID) the mail pieces that need to be reprinted.

So what's next?

That depends on your systems and the applications you run.

Pitney Bowes offers a number of solutions to help you reach the highest levels of integrity and productivity:

- **MakeRight System:** Enables more efficient, automated management and repair of outsourced mail pieces and

corresponding production records via an integrated Direct Connect workstation

- **DFWorks® Production Workflow:** Automatically captures and consolidates information from multiple processing points, even different production sites, and makes it viewable via your Internet browser
- **DFWorks® Document Lifecycle Tracking:** Provides instant online visibility to individual mail pieces, including contents, to clients and line-of-business stakeholders

Pitney Bowes is a leader in end-to-end integrated mail and document solutions. Our leading-edge hardware, software and services can help you grow revenue, cut costs and strengthen customer loyalty, to drive your long-term profitability.
